

Introduction to ReactJS – 2 Day Bootcamp

Course Description

A practical introduction then deep dive into ReactJS. We start with creating an environment to run React apps, add database connectivity (NoSQL) then start building components to push content to our client. We end by further developing our components and adding plugins that are compatible to our application.

Syllabus

Day01

Part 01 – ReactJS Environment Setup

Part 02 – Intro to Components

Part 03 – Developing the Header

Part 04 – Adding the Container

Part 05 – The Footer

Part 06 – Implementing a Router

Part 07 – Constructing the root/home Path

Part 08 – Component Organization

Part 09 – Test Server (json-server)

Part 10 – Doing a Database Dump

Part 11 – Coding the Get Request

Part 12 – Showing the Results of a Get Request

Day 02

Part 01 – Registration Form

Part 02 – Preparing Form Values

Part 03 – Storing Form Values

Part 04 – Adjusting the Menu

Part 05 – Logging-in Process

Part 07 – User Verification

Part 08 – Updating Login

Part 09 – Logging Out
